CODEHUNTER

Advanced Malware Threats are Invisible to Existing Security Solutions.

Find them with CodeHunter.

CodeHunter provides complete visibility into dangerous malware threats that are actively targeting your business. Our patented static, dynamic, and AI-based analysis platform automates the malware reverse engineering process and delivers actionable threat intelligence your security team needs to remediate threats quickly.

Existing security measures fall short in identifying unknown & advanced threats.

❯ Security teams struggle to keep up with the growing volume and complexity of malware threats.

❯ Existing solutions aren't designed to identify zero-day, multi-part malware, and custom attacks.

❯ Complex malware analysis requires reverse engineering by specialized analysts, and can take weeks or months to complete.

With CodeHunter, MALWARE CAN'T HIDE.

Automatically identify, analyze, and get actionable intelligence on advanced malware threats to:

❯ Supercharge your security tech stack to perform better, stronger and faster.

❯ Improve incident response with automation and actionable insights.

❯ Gain business efficiency saving, time, money and resources.

CodeHunter starts where other security solutions stop.

PROACTIVE
Identify new threats, safeguard your systems against emerging cyber risks and ensure uninterrupted operations.

ACTIVE
Rapidly identify and neutralize threats, even during an active incident. Enhance your cybersecurity posture and reduce potential damage.

REACTIVE
In case of a cyber-attack, security teams get threat intelligence to remediate threats fast and reduce vulnerabilities.

Automated Threat Identification & Analysis

❯ Stay ahead of evolving threats with patented, automated, holistic analysis from CodeHunter. Examine files from just about anywhere in minutes.

❯ Fully automate the reverse engineering process of unknown malware threats, including zero-day exploits, multi-part malware and custom threats to improve response time.

❯ Reduce false positives with more accurate and detailed analysis of suspicious files and activities, so you know what's truly a threat to your business.

Complete Advanced Malware Protection

❯ Automate the identification of potentially dangerous files in minutes so you can identify, contain and remediate threats quickly before they do harm.

❯ Security teams can leverage CodeHunter verdicts to prioritize workloads ensuring the most critical issues are addressed first.

❯ Go beyond the sandbox with a holistic malware analysis platform. CodeHunter goes deeper than signature and pattern-based techniques, focusing on behavioral activity down to the binary code level.

Actionable Threat Intelligence

❯ Empower security teams with the context they need to identify, contain and remediate threats swiftly and efficiently.

❯ Automate the translation of technical findings into executive-ready reports designed for clarity and impact.

❯ Feed insights back into the organization's security tech stack supercharging those solutions to perform better, stronger, faster.

> "CodeHunter accelerates unknown malware identification and analysis, ensuring a swift response to cyber threats, and enhancing our overall cybersecurity posture."
